

Central Management & Control (CMC)

Add-On Software for Centrally Managing Cruzer® Enterprise USB Flash Drives

With the increasing popularity of USB flash drives as business tools, organizations have come to realize the need for secure and reliable company-issued devices such as SanDisk Cruzer Enterprise. The fact remains, however, that keeping track of mobile data coming in or leaving a company on USB flash drives poses significant challenges for IT departments. Since data stored on portable storage devices is generally not covered by routine company procedures, such as backup, encryption, or asset management, it's better to be safe than sorry by instituting special safeguards to protect against loss of sensitive company data.

Central Control, Increased Protection

Cruzer Enterprise Central Management & Control Server Software (CMC) is an innovative client-server software solution that utilizes the unique hardware and embedded software capabilities of Cruzer Enterprise devices. The CMC device agent resides on the USB drive, enabling corporate IT departments to centrally manage company-issued Cruzer Enterprise USB devices both inside and outside the corporate environment.

Product Highlights

- Manages the complete lifecycle of company-issued USB drives
- Protects against unauthorized use of sensitive company data
- Tracks and audits activity for regulatory compliance

SanDisk®

Added Security For Corporate Networks

CMC protects your corporate data by coordinating the complete lifecycle of devices, from initial user-deployment, through mundane tasks such as password recovery and data backup, right through to device termination. In this way, CMC provides continuous enforcement of company policy, tracking and monitoring activity beyond the corporate network. By extending the visibility and control over information in motion, you can rest assured that the security of your corporate network is in the safest hands of all — your own.

CMC Features

Centralized deployment and provisioning

- Self-service provisioning to simplify large deployments
- Integration with Active Directory to create device-user association
- Centralized updates and configuration of all device parameters
- Remote password administration

Enhanced device functionality

- Remote disable of lost drives
- Restricted operating environment prevents devices from being used with unauthorized PCs

Auditing and asset management

- Full audit trail of files copied, modified or deleted both on and off the network
- Complete monitoring and reporting of device usage

Business continuity with seamless device backup

- Restore or recreate lost and stolen drives
